Dimensions	Metric
Upper Length (inside)	286mm
Upper Width (with flange)	198,6mm
Upper Length (with handles)	249,3mm
Bottom Width (external)	161,1mm
Height (with standard lid)	266mm

Nominal Capacity	10 000ml
Total Capacity	11 700ml
Total Usable Capacity	10 600ml

Container weight	300g
Handle weight (PP)	16g
Handle weight (metal)	24g
Lid weight	57-59g

Weight tolerance	+/- 5%
Dimension tolerance	+/- 1mm

Raw Material / Transport and Warehousing

Buckets and lids are made from food-grade polypropylene (PP).

Warehousing: sealed unit pallets, which include even numbers of bases and lids.

Filling and closing conditions: max. content temperature during filling 95°C. For stacking content temperature should be lower than 45°C. Put not more than 2 warm containers in the stack.

When outside temperature decreases to 25-30° containers will be more rigid and mechanical parameters allowing stacking for maximal static load as below.

Load on the lower container:
Static (T<23°C) : < 45 kg
Transparent containers < 36 kg

Palletizing of containers: product with density 1,6 g/cm³ according to the customer practice giving consideration to the mentioned earlier values.

All materials and dyes used to produce container or lid designed for the food sector are approved for food contact.

All packages from a single pallet should be used immediately after unpacking.

Manufacturer is not responsible for container deformation if stacked with other products on top of finished pallet.

Pelletisation at delivery

560 units (buckets & lids)
per pallet

Standard Colours

Colour and IML options available
(minimum orders apply).
