### Compatibility

Some chemicals, and process parameters, can affect the integrity of the container. The buyer must undertake testing and approval for the container's suitability for the product or application.

We select our materials based on performance requirements:

\*Materials selected offer good resistance to heat. N.B. plastic becomes more flexible when subjected to heat and care must be taken when closing or stacking after hot filling.

\*\* Freezing conditions require special resins and additives, these are available on request.

Standard tolerance of +/- 5%
